

Chundy

Land & Cattle

**7TH ANNUAL MATERNAL
PERFORMANCE BULL SALE**

Saturday,
March 18,
2023

1:00 pm MST
Imperial Auction Market
Imperial, NE

www.chundylandandcattle.com

Dear Cattlemen,

Welcome to Chundy Land and Cattle's 7th Annual Maternal Performance Bull Sale. We are blessed to have made it this far and we are grateful to our customers who have helped us get here. We have decided to add Maternal Performance to the name of our bull sale. We believe that true performance starts with the cow and only with her do we all remain in the business. The number one economically important trait to a cow/calf producer is reproductive performance, even over her ability to wean a big calf. If the calf is never conceived there is no weight to be sold at weaning time.

The bulls have DNA parentage, and enhanced EPDs will be available by sale day. We will be posting ultrasound data and any updates along with sale order to our website and Facebook page. If you have

Chundy Land & Cattle

any questions, feel free to give us a call or text. We will offer first breeding season guarantee as we have in the past and all bulls will have passed a semen test prior to

the sale. We will again continue to winter the bulls until late April when we will begin delivery. If you need your bull sooner just let us know on sale day.

We look forward to seeing you all again on March 18 in Imperial, and thank you for your continued support of our breeding program! The following page outlines all the information regarding the sale along with the terms and conditions. The bulls are available for viewing here at the Ranch and will be available to view in Imperial Thursday, March 16 for your convenience. Join us after the sale for refreshments and a Tri-Tip supper! See you on sale day!

ONLINE BIDDING

Online Bidding will be available at www.dvauction.com

VIDEOS

Videos will be available on www.dvauction.com and www.chundylandandcattle.com

TERMS AND CONDITIONS

Cattle will sell under the Terms and Conditions recommended by the American Angus Association. The terms of the sale are cash. All settlements must be made at the close of the auction. Any disputes as to bids shall be settled by the auctioneer, whose decision shall be final and shall bind purchases to the announcement of the sale and sale price.

BREEDING GUARANTEE

All bulls selling for \$3,500 or more will be guaranteed for the first breeding season. The breeding season is defined as the 90 days following bull turn out. 100% of the purchase value minus the salvage value of \$1500 will be given as credit toward next year's sale or a replacement bull if one is available. Should a bull be injured, Chundy Land & Cattle needs to be contacted immediately and bulls must be diagnosed by a veterinarian. All claims need to be submitted by September 1, 2023.

WINTERING AND DELIVERY

All bulls will be available to be picked up sale day and a \$50 credit per bull will be applied. All bulls will be cared for free of charge until April 30, 2023, after that a \$5.00 a

day per bull will be charged. We will deliver all bulls free of charge within a 300 mile radius of Imperial, Nebraska. We will start delivering bulls at the end of April.

HERD HEALTH AND BSE

All bulls are on a complete health program and bulls are certified virgin bulls. The bulls have been vaccinated and dewormed and have tested negative for BVD PI. All bulls have passed a Breeding Soundness Exam unless they were too young to test. These bulls will be noted on sale day as such. All bulls will be guaranteed fertile before you turn out. Interstate health papers will be furnished on all bulls. Scrotal measurements will be available by sale day.

INSPECTIONS OF BULLS

Bulls will be available for viewing at the ranch anytime. Directions to the ranch from Imperial, NE; take the Spur highway 15A west out of Imperial to Champion. Turn west on Road 734. Continue on for 7 miles and turn South on Avenue 320. Take 320 south for 7 ½ miles and the driveway is on the west side of the road marked with a Chundy Land and Cattle sign. The bulls will also be available March 16, 17, and 18 at Imperial Auction Market.

DNA

All bulls have been DNA tested and EPDs are genetically enhanced.

ULTRASOUND

Ultrasound work will be completed by Samantha England (660) 888-8144. Data will be available on sale day.

ANNOUNCEMENTS

All announcements and supplemental information take precedence over information listed in this catalog.

LUNCH

Complimentary lunch and refreshments will be available sale day.

Catalog Designed by
Chrisman Cattle Services
www.chrismancattleservices.com

American Angus & American Simmental EPDs & \$ Value Definitions

CALVING EASE DIRECT (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

BIRTH WEIGHT EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WEANING WEIGHT EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

YEARLING WEIGHT EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

SCROTAL CIRCUMFERENCE EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

CALVING EASE MATERNAL (CEM)(MCE), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

MATERNAL MILK EPD (MILK)(MA), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

COW ENERGY VALUE (\$EN), expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

MARBLING EPD (MARB)(MS), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

RIBEYE AREA EPD (RE)(REA), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

FAT THICKNESS EPD (FAT), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

BACK FAT (BF), expressed in inches of backfat.

WEANED CALF VALUE (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

FEEDLOT VALUE (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

BEEF VALUE (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

TERMINAL INDEX (TI), expressed in dollars per cow exposed under a terminal-sire scenario. Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

ALL-PURPOSE INDEX (API), expressed in dollars per cow exposed under an all-purpose-sire scenario. Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Genomic Testing & Genomic Enhanced EPDs

AMERICAN ANGUS ASSOCIATION GENOMIC ENHANCED EPDS

Genomic results are a way to enhance predictability of current selection tools, to achieve more accuracy on EPDs for

younger animals, and to characterize genetics for traits where it's difficult to measure the animal's own performance for the trait, such as carcass traits in breeding stock or maternal traits in bulls. With the investment in genomic technology, this means that in addition to the pedigree, performance and progeny information that are used in the calculation and reporting of Angus EPDs, genomic test results have also been incorporated into the EPD.

Genomic-enhanced EPDs (GE-EPDs) are important because they make use of the results from the DNA test in addition to all other sources of information to provide added accuracy and reliability to the animal's EPD. In fact, depending on the trait, GE-EPDs on unproven animals have the same amount of accuracy as if they had already sired 8-20 calves.

**It is important to note that genomics do not completely describe the*

variation in the traits of interest. Phenotypic measures collected by Angus breeders, such as birth, weaning, and yearling weights, ultrasound scan data, carcass data, etc., continue to be an important part in further development of improved genomic panels, not to mention an important component in EPD calculation.

HOW ARE GENOMIC TEST RESULTS REPORTED?

The results of genomic testing are provided in percentile rankings, based on a reference population of more than 15,000 tested Angus animals. Ranks range from 1 to 100 with lower numbers generally favored for most traits. Some traits for which percent ranks are available, are not yet included in GE-EPDs powered by AngusGS. These include ranks for heifer pregnancy, measures of feed efficiency and end-product tenderness, which are relevant to Angus breeders as well as their bull customers, cattle feeders, and consumers.

When making selection decisions for traits that have EPDs provided by the AAA, the EPDs should be the selection tool of choice. The EPDs account for all sources of information available on the animal – pedigree, own record, weights/measures, and genomic results.

We will have full AngusGS results available sale day.

- We have been wanting to use his sire Baldridge Alternative for a few years now. We were at a complete dispersal in 2018 with a set of replacements heifers. My eyes kept returning to the Alternative daughters.
- Montana Ranch described 1100 as “an absolute powerhouse with tremendous depth, fleshing ability and muscle.” I found 1100 while attending Montana Ranch’s Female sale in October. We bought his full sister 1103 that day.
- 1100 recorded an IMF ratio of 162 and is in the top 4% for CED and still maintains a top 40% WW EPD. We cannot wait to see his daughters in production. Look for his progeny in future sales.

Thank you!
